---

## Difficulty Level: Moderate

The Cricut is an electronic cutting and writing tool that makes professional quality projects with ease!

Using Cricut Design Space, you can either upload your own designs or use one of their templates. Keep in mind that some templates are free, but others may have a cost associated with them. After you upload your design, the Cricut will precisely cut the materials you have placed on the cutting mat. The Cricut has adjustable settings that regulate the speed and force with which the Cricut will cut different types of materials. These include: vinyl, thin wood, card stock, paper, fabric, and more.

For more tips and tricks, see the Cricut Guide located within the Makerspace.
